

## Table of Contents

*This Xurrent Development Update is made up of the following sections:*

- [Enhancements Released to Production](#)
- [Enhancements Release to QA & Demo](#)
- [Important Messages](#)
- [Developer Documentation Change Log](#)

## Enhancements Released to Production

*The enhancements of the release that was transferred to the QA and demo environments last weekend have now been migrated to production. This concerns the following improvement(s):*

No updates.

## Enhancements Released to QA & Demo

*The latest release is now ready to be tested in the QA and demo environments. New features and / or enhancements are described in the following section(s).*

### 1. User Sessions in Access & Security

A security feature has been added to the Access & Security tab of the Personal Settings console. The new section, 'Currently Signed In', displays all concurrent user sessions of the user. Not only can the user see if the system is accessed from an unknown IP address or on an unknown device, but it is also possible to immediately revoke that access.

Notification Settings	Currently Signed In	
Chat Settings	You are currently signed in to Xurrent on the following devices. Notice anything suspicious? Contact your account administrators and revoke sessions immediately.	
Out of Office		
Access & Security	Chrome 131.0.0.0 (Other) Originated from <a href="#">212.59.67.139</a> - Current session	Last seen just now
Personal Access Tokens	Chrome 132.0.0.0 (Mac) Originated from <a href="#">212.59.67.139</a> - <a href="#">Revoke</a>	Last seen 02:23am
Privacy & Terms		

## Important Messages

*The following section(s) concern(s) changes to existing functionality or new features that may impact Xurrent's behavior, depending on account-specific configurations or integrations. These changes should always be tested in the Quality Assurance environment. If not otherwise specified, these changes will go to production next week.*

### 1 of 1: Approving and Rejecting With Required Fields

We have changed the behavior of the **Thumb up** and **Thumb down** buttons in approval tasks in Xurrent Self Service. Heretofore, when a note- or custom field that is required for approval or rejection was not yet populated, the buttons were grayed out until the data was entered. Now, the buttons are active (in green and red) and the validation is done afterwards, just as in the Specialist Interface.

## Developer Documentation Change Log

*The following updates were made to the [Change Log](#) of the Xurrent Developer website for this release.*

No updates.
